                                                                                                                                                                                                                                                                                                                                              fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polypucleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profifing. Note: This sequence does not appear in the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Translational profiling; expressed protein tag; EPT; kinase; phosphatase; protease; protease; protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; MMC; major histocompatability complex; myeloma; colon cancer; gastric cancer;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method for identifying a protein tyrosine phosphatase (PTP) that is reversibly oxidized in a cell by: (1) subjecting a sample, including a cell that contains at least one PTP, to conditions that cause reversible oxidation of PTP; (ii) isolating PTP anaerobically, in presence of a sulfhydryl-reactive agent (II) that irreversibly modifies the thiol group of an invariant Cys in the active site of PTP; and (iii) determining, under reducing conditions, the level of dephosphorylation, caused by PTP, of a labelled substrate (III), where dephosphorylation indicates that an active PTP is present. No details of tests for these activities are given. The method is used to identify modify such PTP; or (b) alter inducible signalling pathways in which PTP are involved. These agents are potentially useful, in human or veterinary medicine, for treating abnormal cell proliferation or growth (cancer); medicine, for treating abnormal cell proliferation or growth (cancer);
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     medicine, for treating abnormal cert protections, for treating abnormal cert protections allergy or other immunosuppressed states; metabolic disorders and cell-cycle abnormalities. This sequence represents one of the PTP enzyme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 protein tyrosine phosphatase; reversible oxidation; dephosphorylation;

                                                                                                                           S
                                                                                                                                                                                                                                                                                    The invention relates to a novel method for diagnosing and analysing CC autoimmune disease or arthritides. The method comprises obtaining a CC patient sample containing mRNA, analysing gene expression using the mRNA CC that results in a gene expression signature of the mRNA, and using that CC gene expression signature to diagnose or analyse the autoimmune disease CC or arthritides in the patient, where gene expression of at least 60% of CC the genes correlates with that of the gene signature. The invention CC further comprises: a treatment of rheumatoid arthritis; identification of CC genes for targeting in the treatment of rheumatoid arthritis in a mammal; an CC array or gene chip, specific for rheumatoid arthritis; an amammal; an CC array or gene chip, specific for rheumatoid arthritis; screening the efficacy of a candidate drug in vitro for the treatment of collagen-cc induced arthritis; and reducing the symptoms associated with collagen-cc antigout, antiinflammatory, dermatological, and immunomodulatory. The methods and compositions of the present invention have the following cativities: immunosuppressive, antirheumatic, antiarthritides, such as CC immune disease caused by an infectious agent. This sequence represents a CC inducence relating to the genes used in the analysis and treatment of collagen-cc relating to the genes used in the analysis and treatment of collagens or arthritides. Note: This sequence is not shown in the specification. It has been supplied in an electronic format from CC MIPO.

                                                                                                                                                                                                                                                                                                                  invention describes performing differential gene expression analysis between the white adipose tissue (WAT) or stromal vascular tissue (SVT) of any two different mice selected from a group consisting of wild-type, HMGI-C -/-, ob/ob, or HMGI-C -/- ob/ob genotype mice. Accordingly, using this method novel nucleotides and the encoded proteins thereof were identified that are adipocyte specific, and as such can be used for preventing adipogenesis, diagnosing and treating diabetes, obesity, hypertension and cardiovascular disease, as well as screening for compounds that can modulate or prevent adipogenesis and treat diabetes or obesity. These compositions exhibit anorectic, antidiabetic and hypotensive activities. This polypeptide sequence is a human homologue of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel method for identifying genes that are over-expressed in adipose tissue and as such it provides targets for anti-
cobesity pharmaceutical compositions. Specifically, it refers to a high mobility group I-C protein (HMGI-C) that is associated with obesity and is epistatic to leptin, furthermore, it refers to the ob gene where an autosomal recessive trait is linked to obesity and diabetes. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Identifying adipocyte specific genes, useful for treating obesity or diabetes, and for identifying drug targets, by differential gene expression analysis between adipose tissue or stromal vascular tissumice of different genotypes.

Contiguous mucleotides of any of the 233 polymucleotide sequences given continued are are an expression vector comprising the above associated proteins. Also included are an expression vector comprising the isolated mucleic acid cited above, a host cell comprising the above crecombinant nucleic acid or expression vector, a microarray for detecting a cancer-associated (CA) nucleic acid comprising at least one probe comprising at least 10 contiguous nucleotides of any of the above comprising at least 10 contiguous nucleotides of any of the above comprising at least 10 contiguous nucleotides of any of the above comprising at least 10 contiguous nucleotides of any of the store comprising the above complement), an isolated antibody, it is antigen binding fragment that binds to the above polypeptide, a hybridoma that produces the above complement, an isolated antibody. (or its antigen binding fragment) that compositional antibody a pharmaceutical excipient, a kit for detecting cancer cells (comprising the antibody cited above, methods for diagnosing cancer conditional, a method for inhibiting growth of cancer cells in an cell individual, a method for delivering a therapeutic agent to cancer conditional antividual, a nelectronic library comprising the above polypeptide (or their fragments), methods of screening conditions and individual, an electronic library comprising the above or anticancer activity or for a bioactive agent capable of modulating the associated with expression of a polypeptide in a test cell sample, a complement of the expression of a modulating the expression of complements and amethod for activity of a CA protein (CAP), methods for detecting, diagnosing, preventing and treating cancers, especially lymphoma and conditions are useful for detecting.

CC agent in a cell. The composition and methods are useful for detecting, diagnosing, preventing and treating cancers, especially lymphoma and conditions are conditions. These may also be used in screening for agents that modulate especially probables ar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated cancer-associated polynucleotides and polypeptides useful for diagnosing, preventing or treating cancers, especially lymphoma an leukemia, or in screening for agents that modulate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   14-FEB-2003; 2003US-00367094.

                                                                    CC has an altered risk for developing myocardial infarction. The method CC comprises detecting a single nucleotide polymorphism (SNP) in any one of CC the nucleotide sequences given in the specification in the individual's CC nucleic acids, where the presence of the SNP is correlated with an CC altered risk for myocardial infarction in the individual. The invention CC further comprises: an isolated nucleic acid molecule comprising at least CC 8 contiguous nucleotides where one of the nucleotides is an SNP given in CC the specification or its complement and encoding any one of the amino CC acid sequences given in the specification; an isolated polypeptide CC comprising an amino acid sequence given in the specification; an antibody CC that specificatly binds to the polypeptide or its antigen-binding CC fragment; an amplified polynucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in CC specification and which is between about 16 and 1000 nucleotides in CC nucleic acid molecule; a method of detecting a variant polypeptide; and a CC nucleic acid molecule; a method of detecting a variant polypeptide; and a CC nucleic acid molecule; a method of detecting are preventing CC method is useful in identifying an individual who has cardiant activity. The nucleic acids of the invention may be used in gene therapy. The CC method is useful in identifying an individual who has an increased or CC composition for treating or preventing myocardial infarction. Note: This sequence represents the protein of a human myocardial infarction. Note: This
             associated gene containing one or more SNP's of the invention. Note: The sequence was not shown in the specification. The sequence has come from an electronic sequence listing downloaded from the WIPO website.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                N-PSDB; ADQ38552.

The invention relates to a novel method for identifying an individual who CC comprises detecting a single nucleotide polymorphism (SNP) in any one of CC the nucleotide sequences given in the specification in the individual's CC nucleic acids, where the presence of the SNP is correlated with an CC altered risk for myocardial infarction in the individual's CC nucleic acids, where the presence of the SNP is correlated with an CC altered risk for myocardial infarction in the individual's CC acid sequences given in its pecification in the individual's CC acid sequences given in the specification; an isolated nucleotides is an SNP given in CC comprising an amino acid sequence given in the specification; an antibody that specifically binds to the polymptide or its antigen-binding CC fragment; an amplified polymucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in CC length; a kit for detecting an SNP in a nucleic acid molecule; a method of detecting are SNP in a nucleic acid molecule; a method of detecting are snew in a nucleic acid molecule; a method of detecting are snew in a nucleic acid molecule; and an enzyme; a method of detecting an SNP in a nucleic acid infarction. The novel detection method has cardiant activity. The nucleic acids of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction and for preparing a composition for treating or preventing myocardial infarction. associated gene containing one or more SNP's of the invention. Note
sequence was not shown in the specification. The sequence has come
an electronic sequence listing downloaded from the WIPO website.

XX The invention discloses a peptide comprising the human leukocyte anti- CC (HLA)-binding peptide of human CD45 polypeptide, its portion or varia CC provided that the peptide is not the intact human CD45 polypeptide. T CC peptides are useful for producing activated cytotoxic T lymphocyte (C CC in vitro which involves contacting the CTL with an antigen-presenting CC cell, where its major histocompatibility complex (MHC) class I molecul CC are loaded with the peptide, to activate, in an antigen specific mann CC where the CTL and the antigen presenting cell are allogenic with resp CC to the class I MHC molecule that is presenting peptides of CD45. The	vel peptide comprising leukocyte antigen binding polypeptide, useful for producing activated cytotoxilling cancerous cells e.g. leukemia.	auss HJ, Amroli	PR 30-NOV-2000; 2000WO-GB004566.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         expressing the CD45 peptides in a patient. A T cell receptor (TCR), recognising cells expressing the CD45 peptides, is useful for killing target cells (cancer cells) in a patient which involves obtaining CTL5 from the patient, introducing into the CTL5 the polynucleotide encoding the TCR and then introducing the cells thus produced into the patient who has undergone an allogenic stem cell transplantation. Tumour reactive CTL5 have been shown to mediate tumour regression in animals models by the inhibition of colony forming unit-granulceyte macrophage (CFU-GM) colony formation. The cancer is leukaemia which expresses the CD45 polypeptide. The method is useful as an immunotherapeutic for treating a patient with haematopoietic malignancy or to target and kill cells which express the CD45 polypeptide. The advantage this method provides is that the CTL5 destroy the malignant haematopoietic cells but not the transplanted cells. The sequence presented is the peptide, huCD45/293,
The invention discloses a peptide comprising the human leukocyte antigen (HLA)-binding peptide of human CD45 polypeptide, its portion or variant, provided that the peptide is not the intact human CD45 polypeptide. The peptides are useful for producing activated cytotoxic T lymphocyte (CTL)
                                                                                                                                                                               Novel peptide comprising leukocyte antigen binding peptide of human CD45 polypeptide, useful for producing activated cytotoxic T lymphocytes, for killing cancerous cells e.g. leukemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; CD45; human leukocyte antigen; HIA; cytotoxic T lymphocyte; CTL; antigen-presenting cell; APC; major histocompatibility complex; MHC; antigen; allogenic; T cell receptor; TCR; cancer; tumour; allogenic; T cell transplantation; CFU-GM; leukaemia;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cc in vitro which involves contacting the CTL with an antigen-presenting cell, where its major histocompatibility complex (MHC) class I molecules are loaded with the peptide, to activate, in an antigen specific manner, combined the contains of the class I molecule that is presenting cell are allogenic with respect to the class I MHC molecule that is presenting peptides of CD45. The contigen-presenting cell contains an expression vector including the collective contains an expression vector including the collective for killing, and in the manufacture of a medicament for, target cells contains an expression vector including the collective contains an expression vector including the collective for killing, and in the manufacture of a medicament for, target cells comparising the CD45 peptides. A T cell receptor (TCR), comparising cells expressing the CD45 peptides, is useful for killing target cells (cancer cells) in a patient. A T cell receptor (TCR), comparising cells expressing the CD45 peptides, is useful for killing collective colls that the polynucleotide encoding the TCR and then introducing the cells thus produced into the patient who has undergone an allogenic stem cell transplantation. Tumour reactive comparising an allogenic stem cell transplantation. Tumour reactive collypeptide. The ender is leukaemia which expresses the CD45 polypeptide. The advantage this method provides is that the CTLs destroy the malignant haematopoietic cells but not the crush comprising an HHA-binding peptide of human CD45 comprising an HHA-binding peptide of human CD45
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

             The peptide is an example of a cell adhesion polypeptide contg. the amino sequence x-Asp-Y-(A)n-Phe, where X and Y = Ala, Leu, Ile or Val, A= any amino acid and n= 3-10. At least a subsequence of the polypeptide is adherent for MOLT-4 human lymphoblastic leukaemia, A375-SM human metastatic melanoma or H1080 human fibrosarcoma cells. The cell adhesion peptides are used to modify or control the adhesive properties of cells, e.g. in treatment of inflammatory conditions such as rheumatoid earth; is, asthma, sepsis, graft rejection, inflammatory bowel disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The peptide is an example of a cell adhesion polypeptide contg. the amino sequence X-Asp-Y-(A)n-Phe, where X and Y = Ala, Leu, Ile or Val, A= any amino acid and n= 3-10. At least a subsequence of the polypeptide is adherent for MOLT-4 human lymphoblastic leukaemia, A375-SM human metastatic melanoma or H1080 human fibrosarcoma cells. The cell adhesion peptides are used to modify or control the adhesive properties of cells, e.g. in treatment of inflammatory conditions such as rheumatoid arthritis, asthma, sepsis, graft rejection, inflammatory bowel disease, reperfusion of cardiac tissue after myocardial infarction, and coagulatory disorders. They are selective antagonists of cell adhesion, e.g. they promote adhesion of the speccified cells but inhibit adhesion to the natural adhesion protein contg. the adhesive sequence.  CC A novel T lymphocyte veto molecule is a chimeric molecule comprising a CC protein, e.g. the present sequence, linked to a targetting polypeptide CC that binds a molecule, which differentiates a host cell from a tissue CC graft cell, or selectively targets a stimulator cell involved in the CC autoimmune response. A veto molecule, in which the protein binds a CC molecule that targets stimulator cells, can be used to suppress an immune CC expense and therefore treat autoimmune diseases, e.g. systemic lupus CC expthematosus, myasthenia gravis, rheumatoid arthritis, insulin dependent CC diabetes mellitus, multiple sclerosis, coeliac disease, autoimmune CC diabetes mellitus, multiple sclerosis, coeliac disease, autoimmune CC allergies and other immunological diseases and rheumatoid carditis, and complete that differentiates graft and host cells, the veto molecule can be used to reduce transplant rejection. The veto molecule provides greefific regulation of particular stimulator cells that can kill graft cells or respond to autoantigens, but leave other stimulator cells can fecting the other. The veto molecule can be administered locally to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S X
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                            The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, reproduce or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polypeloma, colon cancer, pastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed that the form them there is the polypeptide of the screening agents for treating the above mentioned diseases. This sequence represents an expressed that the form them there is the polypeptide is also appeared to the above mentioned diseases. This sequence represents an expressed that the form them there is the polypeptide is also appeared to the above mentioned diseases. This sequence represents an expressed the polypeptide is also appeared to the above mentioned diseases.
                          expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO a

                                                                                       cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention

                                                                                                                                                   The invention describes a purified polypeptide, which comprises a CC fragment of a kinase, phosphatase, protease, protease inhibitor, and transporter cytoskeletal protein, receptor or transcription factor. The CC transporter cytoskeletal protein, receptor or transcription factor. The CC polypeptide is useful as an immunogenic composition for eliciting in a CC mammal an immunogenic response directed against any of the purified CC polypeptide. The purified polypeptide or the antibody that binds to this CC polypeptide, is useful for treating or the privately processed CC wiseful for identifying compounds that binds to this CC wiseful for identifying compounds that binds to this cC class I of the particularly useful for treating or preventing CC mysloma or leukaemia. These are also useful for screening agents for CC treating the above mentioned diseases. This sequence represents an CC expressed protein tag (EPT) isolated from human tissue for translational CC profiling. Note: This sequence does not appear in the printed CC specification but was obtained in electronic format directly from WIPO at CC ftp.wipo.int/pub/published_pct_sequences

The invention relates to human nucleic acids (AAI57798-AAI61369) and the CC encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous containing a polypeptide or polynucleotide of the invention may be used to treat diseases, peripheral neuropathy and collection of the peripheral neuropathy and collection of the peripheral neuropathy and collection of the activities and entral nervous system disease, such as collection of the activities such as Immune system suppression, activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and collection collections. Note: The sequence data for this patent did not form the printed specification

                                                                                                        The invention describes a purified polypeptide, which comprises a CC fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The CC transporter, cytoskeletal protein, receptor or transcription factor. The CC polypeptide is useful as an immunogenic composition for eliciting in a CC mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this CC polypeptide. Is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed CC class I or class II MHC-binding polypeptide. The polypeptides and CC class I or class II MHC-binding polypeptide. The polypeptides and CC polynucleotides are particularly useful for treating or preventing CC myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, CC treating the above mentioned diseases. This sequence represents an CC expressed protein tag (EPT) isolated from human tissue for translational CC profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at CF from interceived the sequence and electronic format directly from WIPO at

                                                                                   The invention describes a purified polypeptide, which comprises a CC fragment of a kinase, phosphatase, protease inhibitor, cytoskeletal protein, receptor or transcription factor. The CC transporter, cytoskeletal protein, receptor or transcription factor. The CC polypeptide is useful as an immunogenic composition for eliciting in a CC mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this CC polypeptide. Is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed CC class I or class II MEC-binding polypeptide. The polypeptides and CC polynucleotides are particularly useful for treating or preventing CC myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an CC expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed profile in the protein tag isolated in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Translational profiling; expressed protein tag; EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; MHC; major histocompatability complex; myeloma; colon cancer; gastric cancer;

                                                                                                                                                                The invention describes a purified polypeptide, which comprises a configuration of a kinase, phosphatase, protease, protease inhibitor. The transporter, cytoskeletal protein, receptor or transcription factor. The colypeptide is useful as an immunogenic composition for eliciting in a colypeptide. The purified polypeptide, or the antibody that binds to this colypeptide. The purified polypeptide, or the antibody that binds to this colypeptide is useful for treating cancer. The polypeptide is also cuseful for identifying compounds that binds to a naturally processed class I MHC-binding polypeptide. The polypeptides and colass I or class I MHC-binding polypeptide. The polypeptides and colypucteotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an corposition or leukaemia. These are also useful for screening agents for creating Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at

                                                                                                                                             The invention describes a purified polypeptide, which comprises a CC fragment of a kinase, phosphatase, protease inhibitor, ctransporter, cytoskeletal protein, receptor or transcription factor. The CC transporter, cytoskeletal protein, receptor or transcription factor. The CC polypeptide is useful as an immunogenic composition for eliciting in a CC mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this CC polypeptide. Is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed CC class I or class II MHC-binding polypeptide. The polypeptides and CC class I or class II MHC-binding polypeptide. The polypeptides and CC class I or class II mHC-binding polypeptide. The polypeptides and CC class I or class II mHC-binding polypeptide. The polypeptides and CC class I or class II mHC-binding polypeptide. The polypeptides and CC class I or class II mHC-binding polypeptide. The polypeptides and CC class I or class II mHC-binding polypeptide. The polypeptides and CC class I or class II mHC-binding polypeptide. The polypeptides and CC class I or class II mHC-binding polypeptide. The polypeptides and CC class I or class II mHC-binding polypeptide. The polypeptides and CC class I or class II mHC-binding polypeptide. The polypeptides and CC class I or class II mHC-binding polypeptide. The polypeptides and CC class I or class II mHC-binding polypeptide. The polypeptides and CC class I or class II mHC-binding polypeptide. The polypeptides and CC class I or class II mHC-binding polypeptide. The polypeptide is also class II mHC-binding polypeptide. The polypeptide is also class II mHC-binding polypeptide. The polypeptide polypeptide is also class II mHC-binding polypeptide. The polypeptide polypeptide is also class II mHC-binding polypeptide. The polypeptide polypeptide is also class II mHC-binding polypeptide. The polypeptide polypeptide is also class II mHC-binding polypeptide. The

                                                                                                                        fragment of a kinase, phosphatase, procease, procease inhibitor, creaming of the process of transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide against any of the purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polypucleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expensed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed content of the protein tag isolated in electronic format directly from WIPO at

                                                              Query Match
                                                                                                                                    anaerobically, in presence of a sulfhydryl-reactive agent (II) that irreversibly modifies the thiol group of an invariant Cys in the active site of PTP; and (iii) determining, under reducing conditions, the level of dephosphorylation, caused by PTP, of a labelled substrate (III), where dephosphorylation indicates that an active PTP is present. No details of tests for these activities are given. The method is used to identify reversibly oxidized PTP, also to identify agents that: (a) reversibly modify such PTP; or (b) alter inducible signalling pathways in which PTP are involved. These agents are potentially useful, in human or veterinary guest vs. host disease; autoimmune diseases; altergy or other immunosuppressed states; metabolic disorders and cell-cycle abnormalities. This sequence represents one of the PTP enzyme of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          protein tyrosine phosphatase; reversible oxidation; dephosphorylation; inducible signalling pathway; cell proliferation; cancer; guest vs. host disease; autoimmune disease; allergy; metabolic disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Identifying reversibly oxidiz screening for specific modula cancer or autoimmune disease.
                                                                                             Sequence 1143
                                                                                                                                                                                                                                                                                                                                               The invention relates to a method for identifying a protein tyrosine phosphatase (PTP) that is reversibly oxidized in a cell by: (i) subjecting a sample, including a cell that contains at least one PTP, conditions that cause reversible oxidation of PTP, (i) isolating PTP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cytostatic; immunosuppressive; antiallergic; protein tyrosine phosphatase; reversible oxi

                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated protein of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.

                                                                                                                                                                                                                                                                     The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytotatatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and c.N.S disorders.                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                           5
                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes a purified polypeptide, which comprises a CC fragment of a kinase, phosphatase, protease, protease inhibitor. The CC transporter, cytoskeletal protein, receptor or transcription factor. The CC transporter, cytoskeletal protein, receptor or transcription factor. The CC polypeptide is useful as an immunogenic composition for eliciting in a CC mammal an immunogenic response directed against any of the purified CC polypeptide. The purified polypeptide, or the antibody that binds to this CC polypeptide. The purified polypeptide on an aturally processed CC class I or class II MHC-binding polypeptide. The polypeptides and CC class I or class II MHC-binding polypeptide. The polypeptides and CC polynucleotides are particularly useful for treating or preventing CC myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, CC treating the above mentioned diseases. This sequence represents an CC treating the above mentioned diseases. This sequence represents an CC expressed protein tag (RPT) isolated from human tissue for translational CC specification but was obtained in electronic format directly from WIPO at Creating on the printed specification but was obtained in electronic format directly from WIPO at

The human KPP proteins and polynucleotides can be used in diagnosing, treating and preventing diseases or conditions associated with the decreased expression or overexpression of KPP, such as cell proliferative (e.g. cancer, atherosclerosis), neurological (e.g. allergies) and developmental (e.g. Hypothyroidism, Cushing's syndrome) disorders, or infections. They can also be used in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of KPP. The KPP or its fragments are useful in screening compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the target polynucleotide and compounds that specifically bind to or modulate the activity of the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antiarteriosclerotic; anticonvulsant; nootropic; neuroprotective; cerebroprotective; anti-HTV; antialLergic; antiinflammatory; chyromimetic; gene therapy; cell proliferative disorder; cancer; atherosclerosis; neurological disorder; epilepsy; Huntington's disease; stroke; immune disorder; inflammatory disorder; AIDS; allergy;

myocardial infarction-associated

gene derived

protein, SEQ ID 1041

```
Reconstiguous mucleotides where one of the nucleotides is an SNP given in the specification or its complement and encoding any one of the amino acid sequences given in the specification; an isolated polypeptide comprising an amino acid sequence given in the specification; an antibody that specifically binds to the polypeptide or its antigen-binding fragment; an amplified polynucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in length; a kit for detecting an SNP in a nucleic acid, comprising the polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid comprising the method for identifying an agent useful in treating or preventing myocardial infarction. The novel detection method has cardiant activity. The nucleic acids of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction and for preparing a composition for treating or preventing myocardial infarction. This sequence represents the protein of a human myocardial infarction. Note: This sequence was not shown in the specification. The sequence has come from the world and composite.
                                                                                                                                           Query Match

The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's nucleic acids, where the presence of the SNP is correlated with an altered risk for myocardial infarction in the individual. The invention further comprises: an isolated nucleic acid molecule comprising at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             20-DEC-2002; 2002US-0434778P.

                                                                                                                                                                   invention describes performing differential gene expression analysis between the white adipose tissue (WAT) or stromal vascular tissue (SVT) of any two different mice selected from a group consisting of wild-type, and the condition of the condition of the encoded group mice. Accordingly, using this method novel nucleotides and the encoded proteins thereof were identified that are adipocyte specific, and as such can be used for preventing adipogenesis, diagnosing and treating diabetes, obesity, hypertension and cardiovascular disease, as well as screening for compounds that can modulate or prevent adipogenesis and treat diabetes of obesity. These compositions exhibit anorectic, antidiabetic and hypotensive activities. This polypeptide sequence is a human homologue of a murine adipocyte specific protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to a novel method for identifying genes that are over-expressed in adipose tissue and as such it provides targets for anti-
cobesity pharmaceutical compositions. Specifically, it refers to a high mobility group I-C protein (HMGI-C) that is associated with obesity and is epistatic to leptih, furthermore, it refers to the ob gene where an autosomal recessive trait is linked to obesity and diabetes. The present
                                                                                                                                       Sequence 1256 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying adipocyte specific genes, useful for treating obesity or diabetes, and for identifying drug targets, by differential gene expression analysis between adipose tissue or stromal vascular tissue mice of different genotypes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     human; adipocyte specific; adipose tissue; anti-obesity; high mobility group I-C protein; HMGI-C; obesity; leptin; ob;.diabetes; adipogenesis; hypertension; cardiovascular disease; anorectic; antidiabetic; hypotensive; PTPase receptor type C.

                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to diagnosing or monitoring transplant rejection, e.g. cardiac or kidney transplant rejection, in an individual comprises detecting the expression level of one or more genes. The methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic sislet, lung, bone marrow or stem cell transplant rejection, in an individual. The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lung, bacterial or fungal infection. The present sequence represents a protein encoded by an mRNA sequence of the invention which show altered

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a novel method for identifying an individual who has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's nucleic acids, where the presence of the SNP is correlated with an altered risk for myocardial infarction in the individual. The invention further comprises: an isolated nucleic acid molecule comprising at least 8 contiguous nucleotides where one of the nucleotides is an SNP given in the specification or its complement and encoding any one of the amino acid sequences given in the specification; an isolated polypeptide
                                                                                                                                                                                                                                                                                                                                  The nucleic acids of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction and for preparing a composition for treating or preventing myocardial infarction. This sequence represents the protein of a human myocardial infarction-associated gene containing one or more SNP's of the invention. Note: This sequence was not shown in the specification. The sequence has come from an electronic sequence listing downloaded from the WIPO website.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           comprising an amino acid sequence given in the specification; an antibody that specifically binds to the polypeptide or its antigen-binding fragment; an amplified polynucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in length; a kit for detecting an SNP in a nucleic acid, comprising the polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid molecule; a method of detecting a variant polypeptide; and a method for identifying an agent useful in treating or preventing myocardial infarction. The novel detection method has cardiant activity.
                                                                                                                                                                                                                                                                                               Sequence 1258
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying an individual who has an altered risk for developing myocardial infarction by detecting a single nucleotide polymorphism the individual's nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       N-PSDB; ADQ38548.

The invention relates to a novel method for identifying an individual who CC has an altered risk for developing myocardial infarction. The method CC comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's CC nucleic acids, where the presence of the SNP is correlated with an CC further comprises: an isolated nucleic acid molecule comprising at least CC 8 contiguous nucleotides where one of the nucleotides is an SNP given in the specification or its complement and encoding any one of the amino CC comprising an amino acid sequence given in the specification; an antibody that specifically binds to the polypeptide or its antigen-binding CC fragment; an amplified polynucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in a cC nucleic acid molecule; a method of detecting a variant polypeptide; and a cC method for identifying an agent useful in treating or preventing CC myocardial infarction. The novel detecting a variant polypeptide; and a cC method for identifying an agent useful in treating or preventing cC composition for treating or preventing myocardial infarction. This sequence represents the protein of a human myocardial infarction. This sequence was not shown in the specification. The sequence has come from cC sequence was not shown in the specification. The sequence has come from an electronic sequence listing downloaded from the WIPO website.
                                                                                                                     Query Match

                                                                                                                                                                                                                                                                    The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor enternascription factor. polypeptide is useful as an immunogenic composition for eliciting in mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polynucleotides are particularly useful for treating or preventing
                                                                                                                                                                      expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO a
                                                                                                                                                                                                                       myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melymphoma or leukaemia. These are also useful for screening agents treating the above mentioned diseases. This sequence represents an

                                                                                                                                                                     The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor. The transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class I MHC-binding polypeptide. The polypeptides and polypeptide aparticularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                    fragment of a kinase, phosphatase, profease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MIC-binding polypeptide. The polypeptides and polypucleotides are particularly useful for treating or preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Translational profiling; expressed protein tag; EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; MHC; major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.

No details of tests for these activities are given. The method is used to identify reversibly oxidized PTP, also to identify agents that; (a) reversibly modify such PTP, or (b) alter inducible signalling pathways in which PTP are involved. These agents are potentially useful, in human or veterinary medicine, for treating abnormal cell proliferation or growth (cancer);

or arthritides in the patient, where gene expression of at least 60% of the genes correlates with that of the gene signature. The invention further comprises: a treatment of rheumatoid arthritis; identification of genes for targeting in the treatment of rheumatoid arthritis in a mammal other than a mouse; diagnosis of rheumatoid arthritis in a mammal, an array or gene chip, specific for rheumatoid arthritis; diagnosis or analyses of autoimmune disease or rheumatoid arthritis; screening the efficacy of a candidate drug in vitro for the treatment of collageninduced arthritis; and reducing the symptoms associated with collageninduced arthritis. The compositions of the invention have the following activities: immunosuppressive, antirheumatic, antiarthritic, osteopathic,
                                                        antigout, antiinflammatory, dermatological, and immunomodulatory. The methods and compositions of the present invention are useful for diagnosing and treating autoimmune disease or arthritides, such as rheumatoid arthritis, lupus, ankylosing spondylitis, fibrositis, fibrositis, fibrositis, and an fibromyalgia, osteoarthritis, gout, juvenile rheumatoid arthritis, and an immune disease caused by an infectious agent. This sequence represents a protein sequence relating to the genes used in the analysis and treatment of autoimmune diseases or arthritides. Note: This sequence is not shown in the specification. It has been supplied in an electronic format from

                                                                                                                                                                                                                                                                                                                                                     invention describes performing differential gene expression analysis between the white adipose tissue (MAT) or stromal vascular tissue (SVT) of any two different mice section a group consisting of wild-type, HMGI-C -/-, ob/ob, or HMGI-C -/- ob/ob genotype mice. Accordingly, using this method novel nucleotides and the encoded proteins thereof were identified that are adipocyte specific, and as such can be used for preventing adipogenesis, diagnosing and treating diabetes, obesity, hypertension and cardiovascular disease, as well as screening for compounds that can modulate or prevent adipogenesis and treat diabetes or obesity. These compositions exhibit anorectic, antidiabetic and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to a novel method for identifying genes that are over-expressed in adipose tissue and as such it provides targets for anti-obesity pharmaceutical compositions. Specifically, it refers to a high mobility group I-C protein (HMGI-C) that is associated with obesity and is epistatic to leptin, furthermore, it refers to the ob gene where an autosomal recessive trait is linked to obesity and diabetes. The present interpretation of the control of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying adipocyte specific genes, useful for treating obesity or diabetes, and for identifying drug targets, by differential gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         adipogenesis;

                                                                                                                                                                                                                                           CC mentioned nucleotide sequences, an isolated golypeptide (encoded within CC an open reading frame of a CA sequence selected from any of the 95 CC polynucleotide sequences as mentioned in the specification, or its CC complement), an isolated antibody, (or its antigen binding fragment) that be binds to the above polypeptide, a hybridoma that produces the above CC monoclonal antibody, a pharmaceutical composition comprising the above CC antibody and a pharmaceutical excipient, a kit for detecting cancer CC cells (comprising the antibody cited above, methods for diagnosing cancer CC individual, a method for inhibiting growth of cancer cells in an CC individual, a method for delivering a therapeutic agent to cancer cells in an individual, an electronic library comprising the above CC polynucleotide or polypeptide (or their fragments), methods of screening CC for anticancer activity or for a bioactive agent capable of modulating CC associated with expression of a polypeptide in a test cell sample, a cethod for treating cancers and a method for inhibiting the expression of CC Agene in a cell. The composition and methods are useful for detecting, diagnosing representation and methods are useful for detecting, diagnosing representation and methods are useful for detecting.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid comprising at least 10 contiguous nucleotides of any of the 233 polynucleotide sequences given in the specification, or its complement. The nucleic acids encode cancerassociated proteins. Also included are an expression vector comprising the isolated nucleic acid cited above, a host cell comprising the above recombinant nucleic acid or expression vector, a microarray for detecting a cancerassociated (CA) nucleic acid comprising at least one probe comprising at least 10 contiguous nucleotides of any of the above.
                                                             diagnosing, preventing and treating cancers, especially lymphoma and leukaemia. These may also be used in screening for agents that modulate cancer. The present sequence is a human CAP protein sequence. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            claim 18; seqid 147; 310pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated cancer-associated polynucleotides and polypeptides useful for diagnosing, preventing or treating cancers, especially lymphoma and leukemia, or in screening for agents that modulate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Morris DW,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ADQ39380
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 32
      The invention relates to a novel method for identifying an individual who has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's nucleotide sequences given in the specification in the individual's current comprises; an isolated nucleic acid molecule comprising at least contiguous nucleotides where one of the nucleotides is an SNP given in the specification or its complement and encoding any one of the amino acid sequences given in the specification; an isolated polypeptide comprising an amino acid sequence given in the specification; an isolated polypeptide fragment; an amplified polynucleotide or its antigen-binding fragment; an amplified polynucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in nucleic acid molecule; a method of detecting an SNP in a nucleic acid, comprising the polynucleotide, a method of detecting an variant polypeptide; and a method for identifying an agent useful in treating or preventing method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction method and for preparing a composition for treating or prevention and has cardiant activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

           acid sequences given in the specification; an isolated polypeptide comprising an amino acid sequence given in the specification; an antit that specifically binds to the polypeptide or its antigen-binding fragment; an amplified polynucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in length; a kit for detecting an SNP in a nucleic acid, comprising the polynucleotide, a buffer and an enzyme; a method of detecting an SNP nucleic acid molecule; a method of detecting an SNP nucleic acid molecule; a method of detecting an SNP nucleic acid molecule; a method of detecting a variant polypeptide; a method for identifier as method of detecting a variant polypeptide; a method of detecting as SNP nucleic acid molecule; a method of detecting a variant polypeptide; a method of detecting as SNP nucleic acid molecule; a method of detecting as SNP nucleic acid molecule; a method of detecting a variant polypeptide; a method of detecting as SNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a method of detecting a sNP nucleic acid molecule; a metho
                                                                                                                                                                                                                                          comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's nucleic acids, where the presence of the SNP is correlated with an altered risk for myocardial infarction in the individual. The invention further comprises: an isolated nucleic acid molecule compristing at least 8 contiguous nucleotides where one of the nucleotides is an SNP given in the specification or its complement and encoding any one of the amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 myocardial infare
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        20-DEC-2002; 2002US-0434778P.

CC myocardial infarction. The novel detection method has cardiant activity.

CC The nucleic acids of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or composition for treating or preventing myocardial infarction and for preparing a composition for treating or preventing myocardial infarction. This composition for treating or preventing myocardial infarction. This composition of a human myocardial infarction. This composition is sequence ontaining one or more SNP's of the invention. Note: This sequence was not shown in the specification. The sequence has come from the sequence listing downloaded from the WIPO website.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           seq length: 0 seq length: 2000000000

Novel peptide comprising leukocyte antigen binding peptide of human CD45 polypeptide, useful for producing activated cytotoxic T lymphocytes, for killing cancerous cells e.g. leukemia.

Claim 2; Page 38; 56pp; English.

The invention discloses a peptide comprising the human leukocyte antigen (HLA)-binding peptide of human CD45 polypeptide, its portion or variant, provided that the peptide is not the intact human CD45 polypeptide. The peptides are useful for producing activated cytocoxic T lymphocyte (CTL) in vitro which involves contacting the CTL with an antigen-presenting cell, where its major histocompatibility complex (MHC) class I molecules are loaded with the peptide, to activate, in an antigen specific manner, where the CTL and the antigen presenting cell are allogenic with respect to the class I MHC molecule that is presenting peptides of CD45. The

The activated CTLs are useful CC polynucleotides encoding the CD45 peptides. The activated CTLs are useful CC for killing, and in the manufacture of a medicament for, target cells CC expressing the CD45 peptides in a patient. A T cell receptor (TCR), CC recognising cells expressing the CD45 peptides, is useful for killing CC target cells (cancer cells) in a patient which involves obtaining CTLs CC from the patient, introducing the CD45 peptides, is useful for killing CC the TCR and then introducing the cells thus produced into the patient who CC has undergone an allogenic stem cell transplantation. Tumour reactive CC cTLs have been shown to mediate tumour regression in animals models by CC the inhibition of colony forming unit-granulocyte macrophage (CFU-GM) CC colony formation. The cancer is leukaemia which expresses the CD45 polypeptide. The method is useful as an immunotherapeutic for treating a CC express the CD45 polypeptide. The advantage this method provides is that the CTLs destroy the malignant haematopoietic cells but not the CTLs destroy the malignant haematopoietic cells but not the CTLs destroy the malignant face presented is the peptide, huCD45/244,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                    A novel T lymphocyte veto molecule is a chimeric molecule comprising a protein, e.g. the present sequence, linked to a targetting polypeptide that binds a molecule, which differentiates a host cell from a tissue graft cell, or selectively targets a stimulator cell involved in the
                                                                                                                                                                         Tlymphocyte veto molecule comprising response cell activating protein linked to molecule that targets stimulator cell marker, used for selective suppression of immune response, e.g. prevention of graft rejection or treatment of auto-immune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Homo sapiens

Where the protein binds a molecule that differentiates graft and host cells, the veto molecule can be used to reduce transplant rejection. The veto molecule provides specific regulation of particular stimulator cells that can kill graft cells or respond to autoantigens, but leave other stimulator cells unaffected, e.g. CD4 or CD8 positive cells can be regulated without one affecting the other. The veto molecule can be administered locally to minimise generalised immunosuppression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            protease; protease inhibitor; cancer; MHC; receptor; transcription factor; cancer; MHC; major histocompatability complex; myeloma; complex; myeloma; complex; myeloma; complex; myeloma;
                                                                                                              New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma
                                                                                                                                                                                                                                                                                                                                                                   28-MAR-2002; 2002WO-US009671.

The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polynucleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at
The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess forensics, and for nutritional purposes. The present sequence is a

              The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide, is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class I MRC-binding polypeptide. The polypeptides and polypucleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma. Lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
